**Excerpt from General Appropriation Bill passed by the
58th General Assembly:**

“To establish a Serum Plant for the purpose of manufacturing and distributing Anti-Hog Cholera Serum to the swine owners of Tennessee at actual cost of production, said plant to be under the direct supervision of the State Veterinarian. The amount of this appropriation to be paid out of the State Treasury on vouchers approved by the Commissioner of Agriculture. \$10,000.00”

EXPLANATORY NOTE.

In compliance with an Act of the 58th General Assembly, we have caused to be erected and equipped an Anti-Hog Cholera Serum Plant. This plant is located at 1502 Clinton street, Nashville, Tennessee, and has been constructed according to modern sanitary and hygienic requirements. Experts who have visited and inspected this plant pronounce it complete and perfect in all of its appointments. Has a capacity of 250 hyperimmunes which are capable of yielding no less than 1,000,000 average doses of serum annually. The Dorsett-Niles method will be employed in producing the serum.

Our object in publishing and distributing this illustrated booklet is to acquaint all Tennesseans with the facilities which have been placed at our disposal by the General Assembly for the purpose of combatting the ravages of that great scourge to the swine industry—Hog Cholera—in the Volunteer State.

Every swine owner and all other persons who are interested in the protection and development of the swine-raising industry, are cordially invited to visit this plant and become familiar with the methods here employed in the manufacture and use of Anti-Hog Cholera Serum.
